Inspire the Next

CP-X505 • CP-X605 • CP-X608

High end installation LCD Projector's  
for medium to large venues

## Easy maintenance

### Easy lamp access

The door used to replace the lamp is on the top of the projector, making it easy to change the lamp when the projector is installed on the ceiling.

### High performance air filter

The air filter uses Electret Air Filter charged fibers to efficiently filter out dust so performance does not suffer even in dusty environments.

## Higher image and sound quality

### High image quality

The CP-X608, CP-X605 and CP-X505 have a variety of functions to improve the images that they project. Thanks to Motion Adaptive Progressive Scan, 3:2 Pull Down, Noise Reduction, Equalizing Gamma and 3D Y/C Separation, you can even project moving pictures with beautiful clarity.

### Active Iris

In addition to a high 1000:1 contrast ratio, these projectors feature an Active Iris that is automatically controlled to ensure best image contrast and depth perspective during both bright and dark scenes.

## Flexible installation

### Optional lenses

The four optional lenses, give the user the flexibility to use their projector in a multitude of environments.

### Manual lens shift

The lens can be moved manually to shift the position of the image. It can be moved +/-20 degrees to the left and right, and +/-40 degrees up and down on a the screen. Fine adjustments after ceiling installation can be done using a screwdriver. Adjusting the screen position can also be done easily.

### Quiet 30dB Whisper mode

In order to ensure high quality presentations with this range of projectors, we have designed them to have a 30dB noise level (whisper mode), surprisingly low for this category of projector. Through careful noise suppression, they provide an ideal audiovisual environment.

### Built-in 16W

The CP-X608/X605/X505 have four speakers with a high output of 4W. You get 16W of total output without the need to connect external speakers. And thanks to SRS WOW\*, the sound is both dynamic and clear.

## More detailed management

### Projector monitoring and control

The The CP-X608, CP-X605 and CP-X505 can be integrated into a LAN for centralised monitoring of power, input, lamp time and other functions. In fact, more than 500 projectors can be monitored from a single PC. It is also possible to control the power and other functions of a single specified projector or of all projectors linked via the LAN. This makes operating projectors installed in different rooms a simple task. Moreover, Projector Monitoring and Control can be applied to both wired and wireless networks.

### E-mail alerts

Using Simple Network Management Protocol (SNMP), the projector is able to remotely monitor and diagnose its status and the status of other network applications with SNMP Management Software. When an error or trouble occurs, the projector uses Simple Mail Transfer Protocol (SMTP) to send a warning message to up to five e-mail addresses.

# Easy and simple presentations

## Wireless Presentations (CP-X608)

With the CP-X608, you don't need a cable for connection to a PC — it's done wirelessly! It's quick and easy to start your presentation, and there's no cable to get in your way. You can turn the projector on and off and adjust the volume with a control bar on the PC instead of using a remote control.

## PC-Less Presentations (CP-X608)

More flexibility! You can use HDD media players, USB storage devices or ultra-handry SD cards to give presentations without a PC. In addition to compatibility with a variety of files, including MPEG4 (standard profile), JPEG, BMP and PNG, you enjoy the advantage of auto slide show and endless play functions.

## Control and monitoring via web browser

Projectors can be controlled and monitored via a web browser without having to download and install application software.

## Still image transfer (e-SHOT)\*

Using this function, VGA-quality still pictures can be transferred from a PC to the projector. And by using the Schedule function, the images can be shown at preset times for using the screen like a message board.

## Multi screen function for conferences (CP-X608)

Images from up to four PCs can be shown simultaneously on the screen to add more versatility to your presentations. Any of the images can be selected for viewing on the full screen.

## Projection of external data\* (CP-X608)

Data received by the control PC via LAN from an external memory device can be output from the projector. This means you have a much wider range of material to choose from.

\* To use these functions, it is necessary to download the appropriate software. Ask your dealer for details.

# Standard features

- **3500/4000 ANSI Lumens** with optical zoom.
- **Full Connectivity** - 2 x RGB IN, 1 x Digital RGB IN (M1-D) and RGB monitor out with audio in/out and versatile video connections.

- **Quick Start and Instant Off** - These features are ideal for quick presentations. The image will appear in seconds after power on and the unit can be instantly powered off after a presentation.

- **Input Source Naming** - The name of any input can be changed to one of your own choosing for easier use.

- **My Button** - There are 2 user programmable buttons on the remote control that may be set with any command. The user can set up these buttons from a simple, easy to understand menu.

- **'Resolution Preset'** ensures special resolutions, such as WXGA will be recognised and resized and placed in the optimum position. Custom modes can also be stored to remember user's own resolutions.

- **Whiteboard Mode and Blackboard Mode** – Images displayed on whiteboards may be too bright, whiteboard mode changes the gamma curve to reduce the peak white brightness allowing users to enjoy the benefits of a bright projector but reducing potential health and safety risks of looking directly into one. Blackboard mode provides better colour balance when projecting onto a coloured background.

- **Anti Theft Features** – The three projectors have an impressive suite of anti-theft measures – security bar is a steel bar embedded in the chassis which provides a strong anchor point for a chain. It is also a visible security feature to prevent casual removal:

- Pin-Lock is a means of in-activating the projector until a user preset key sequence is input
- 'My Screen Lock' allows users to personalise the start up screen with a warning or ownership message and lock this screen with a pin code
- A transition detector operates whenever the projection angle or settings are changed from the installed position – this is locked by a pin code
